

### 6-YEAR-OLD HUMAN CHILD SKELETON

An excellent example of an approximately 6-year-old human child. This skeleton serves as an exceptional example of child development and teaching model in the laboratory.

The skeleton is available Articulated, Disarticulated or as a Half-skeleton. We've put together sets such as the Child Bone Box, Economy Comparative Set, and Pelvis Femur Set. Four variations of the skull are available: with and without a calvarium cut, and with and without the dentition exposed. See the reverse side for the full parts list.
